The God Code

Synopsis

What would it mean to discover an ancient languageâ€”a literal messageâ€”hidden within the DNA of life itself? What we once believed of our past is about to change. . . .Â A coded message has been found within the molecules of life, deep within the DNA in each cell of our bodies. Through a remarkable discovery linking Biblical alphabets to our genetic code, the â€œlanguage of lifeâ€” may now be read as the ancient letters of a timeless message. Regardless of race, religion, heritage, or lifestyle, the message is the same in each cell of every woman, child, and man, past and present. Sharing all-new, fascinating research, Gregg Braden discusses the life-changing discovery that led him from a successful career in the aerospace and defense industries to an extensive 12-year study of the most sacred and honored traditions of humankind.

Customer Reviews

I purchased the God Code after being impressed with Mr Braden's Awakening to Zero Point material. Even though I thoroughly enjoy anything that attempts to combine spiritualism and science, it took me a while to absorb the true messages beneath his words. Quantum science

proves we are energy based beings; our carbon based bodies beyond molecules, are waves of energy that when we "look" form particles. The idea that the vibration of the chemical composition of our cells translates to "God/Eternal Within the Body" in Hebrew, Sanskrit, and its been suggested even Arabic, is truly an amazing feat of genetic engineering so to speak. The idea that this is an accident - is just fallacy. There is definitely a universal intelligence behind our design, and the way Braden presents this information is admirable, at a time when Unity is a matter of strategic importance. Quantum science shows that unity strengthens the field, disunity weakens it. The overriding message I get from this book is that all life is precious, because we all have a vibration that comes from the same source. I recommend this book highly, and it makes a useful complement with Dr. Bruce Lipton's Biology of Belief. If ever there was a justification for treating your neighbour with the same integrity and respect as you would yourself, this certainly adds to it. The only minor qualification I would make is that if you're a non-scientist, it might take a while for the pieces to fit together. I was lucky in that I was able to attend one of Mr Braden's seminars, so I had a head start in terms of understanding the overall gist of the information.

I was offered this book by someone who was breathless in her excitement for it. She is also a psychic who claims to "never be wrong" (yet in her psychic physiological assessment of my wellbeing entirely missed my chronic lower-back issues...despite my limping in and out of the session). I bought it, read the introduction, then read 80 pages of it before placing it carefully in my bedroom garbage can. In the introduction he put us on notice that, while he certainly WOULD have submitted his work to the established peer-reviewed journals, he felt his work was too important to be slowed down by their sluggish processes. Why, he even knows of someone whose work took eight years to get past peer-review! He derides this issue of "delay" as a critique of the peer-review process, rather than exactly it's added value. Peer-review without "delay" (i.e., sober, thoughtful analysis of claims, evidence, argument and conclusions) is called "rubber stamping." So he says - still in the Introduction - that he's opted here to bypass peer review for this middle-road: that is, his book is a popular version of what surely WOULD have passed muster had it been peer-reviewed. It brings us peer-reviewed quality without the exasperating hassle of being peer-reviewed. With this assertion, he leaves his scientific credibility wounded, unconscious and face-down in the bathtub. It's not dead yet, but we better see some heroic measures in the next few pages. I think it was on page 11 that he makes a mathematical so simple, so easily spotted and corrected, that it grinds against my bones. He miscalculates how many miles are in a light year. It's middle-school math. It goes like this. Light travels 186,292 miles per second.
